1 CONTEXT AND OBJECTIVES

1.1 CONTEXT

The discovery of the new Inukshuk deposit in 2021 has increased the potential life of mine of Canadian Royalties' Nunavik Nickel Project to 2035. Thus, to ensure continued mining operations, there is also a need to add a new tailings management infrastructure to accommodate mine tailings production from the different sites.

As part of the Environmental and Social Impact Assessment (ESIA) processes for these two new projects, Canadian Royalties conducted public consultations in the three communities that are IBA signatories to the Nunavik Nickel Agreement: Puvirnituq, Kangiqsujuaq and Salluit.

1.2 OBJECTIVES

Canadian Royalties organized a public consultation meeting in each community, with the following objectives:

- Provide information on ongoing projects;
- Get to know community members and talk about how the company can collaborate with communities;
- Ensure that community concerns are heard and addressed;
- Include Inuit knowledge, land use, and community interests to the project's ESIA.

2 ACTIONS LEADING UP TO THE CONSULTATION MEETINGS

Many different channels were used to invite community members to participate in the public consultation meetings, such as:

Communication Tools	Puvirnituq	Kangiqsujuaq	Salluit
Website update	March 26, 2025		
Personalized emails to authorities	March 28, 2025	April 12, 2025	April 28, 2025
Postal card	April 1, 2025	April 22, 2025	May 1, 2025
Facebook post – general meeting announcement	March 28 and April 9, 2025		
Geolocalized Facebook ads	March 31 to April 9, 2025	April 28 to May 6, 2025	May 11 to 21, 2025
Facebook event	March 26, 2025	April 9, 2025	April 28, 2025
Post in local Facebook groups	April 9, 2025	April 30, 2025	May 14, 2025
Facebook post – reminder	April 14, 2025	May 5, 2025	May 20, 2025

Communication Tools	Puvirnituq	Kangiqsujuaq	Salluit
Local FM radio station ads	Weeks of April 7 and 14, 2025	Week of May 5, 2025, and day of the meeting	Week of May 19, 2025, and day of the meeting

Communication tools used in the invitation sequence are available in Appendix 1.

3 SUMMARY OF THE CONSULTATION MEETINGS

3.1 TECHNICAL DETAILS

Community	Date	Location	Number of participants
Puvirnituq	April 16, 2025	Satuumavik Community Center	5
Kangiqsujuaq	May 6, 2025	Qaggiq Community Centre	36
Salluit	May 21, 2025	Natturalik Community Center	15

3.2 CONSULTATION TEAM

Team members present for the public consultation meetings:

	Puvirnituq	Kangiqsujuaq	Salluit
Julien Cameron Director of Technical Services and Projects	X	X	X
Nicolas Kuzyk ESG Manager	X	X	X
Priscilla Simon Environment Technical Coordinator	X	X	X
Johnny A Yuliusie Inuit Employment & Training Officer		X	X
Isaac Gauthier, Facilitator (Transfert Environnement et Société)	X	X	X
Laurence Moreau, Project Manager (Transfert Environnement et Société)	X		

3.3 MEETING AGENDA

The proposed agenda for each consultation meeting was the same in each community:

- Doors were open from 2PM to 7PM, to allow community members to show up when they wanted and chat with the team;
- Meal served at 5PM (for logistical reasons, a meal was not served in Kangiqsujuaq and Salluit, although various snacks and refreshments were available throughout the meeting);
- Project presentation at 5:30 PM (see Appendix 2), followed by a question period (if requested by community members);
- Information kiosks and team members were available throughout the meeting to share information, answer questions, and take note of comments, concerns or suggestions from the community;
- Door prizes (five Coop gift cards per community, in addition to some Canadian Royalties merchandise) were offered at each meeting.

Additionally, the kiosk information and presentations were translated into Inuktitut by local community members and a member of Canadian Royalties team, Johnny A Yuliusie, at each meeting.

Special attention was also provided to community elders and children, with rest areas for community members to chat and refreshments, and a kid's table with crayons, drawings, stickers and more.

3.4 KIOSKS

Three kiosks were available for participants to learn more about Canadian Royalties, ask questions and discuss with team members, in each community:

1. Projects: Maps of the area, images of pipelines and information pamphlets (Appendix 3), were available for the participants.

2. Environment: Posters on caribou protection, the environmental monitoring program as well as the projects' preliminary impacts and mitigation measures were presented (Appendix 4).

3. Community: Participants were encouraged to share about how they used the land. To this end, a participatory workshop was organized. The objective was to open a dialogue with participants and understand how they use of the land, in an informal way, by placing pictograms (hunting, fishing, gathering, hiking, etc.) on maps of the region (see the Kangiqsujuaq example in Appendix 5). Maps of the watershed and communities (Puvirnituq, Kangiqsujuaq and Salluit) were available to facilitate discussion.

4 SUMMARY OF COMMUNITY CONCERNS AND FEEDBACK

Community questions, comments, concerns and feedback are summarized by theme below for the three communities visited by Canadian Royalties.

PROJECT

- New tailings cell concern: freezing of pipelines for the pipeline option (option A);
- Salluit: preference towards the new cell infrastructure option (option B) regarding the two tailings options being assessed by Canadian Royalties;
- Site restoration: preference for filling pits rather than building new cells, as this option is considered more advantageous despite the remoteness of the infrastructure (Kangiqsujuaq).

ENVIRONMENT

- Discussions on Canadian Royalties' decision tree regarding trucking encounters with caribou, as there are strong concerns regarding caribou and mining cohabitation:
    - Suggestion to include project mitigation measures to ensure positive cohabitation
    - Salluit: Comment that certain mining drivers, not necessarily working for Canadian Royalties, honk their horns at caribou so they crossroads quicker
- Main concerns shared to Kativik Environmental Quality Commission (KEQC) from Inuit communities: mining impacts to caribou and dust emissions/management;
- Caribou migration was a topic of interest at all consultation meetings;
- Identify and share information on mining activities on caribou and herd health;

LOCAL COMMUNITY

- Explain what actions Canadian Royalties is doing for Inuit communities (economic benefits, cultural support, environmental protection/monitoring, etc.);
- Salluit: suggestion to include shelters at Deception Bay and site operations for community members, in case of an emergency.

- Facilitate access and communication between the “Women's Camp” and the local road (near the Berbégamo/Allammaq sector):
    - Possibility of providing a radio to the camp to enable communications with the mine in the event of an emergency.

CONSULTATION

- Suggestion: regularly be present in the community and set up a table at the community Coop for meetings and consultations way (feedback received in Puvirnituq and Kangiqsujuaq regarding suggested approach to in-community consultations);
- Use simple and accessible communication tools when reaching out and gathering feedback from the communities (posters, radio messages, Facebook page, etc.)
- Install posters in the communities to invite members to reach out to Canadian Royalties via the above comms tools;
- Attendees requested that updates be broadcast on local radio.

Questions asked after the presentation and via information kiosks are shared below:

#	QUESTION OR COMMENT	ANSWER
Puvirnituq		
1	What are your activities in the Puvirnituq river?	The project’s treated water effluent is released into a tributary of the Puvirnituq River, which explains why the community is included in the Nunavik Nickel Agreement.
2	Who purchases your nickel?	The company is owned by Swiss investors, and the nickel is sold onto the world market.
Kangiqsujuaq		
3	Will the tailing cells be capped?	Yes, they will be capped after operations.
4	How big is the Expo Camp compared to Kangiqsujuaq?	The Expo Camp has approximately 600 rooms.
5	Will the mine close in 2034?	2035 is the current target for the end of operations, but closure depends on meeting all environmental restoration

#	QUESTION OR COMMENT	ANSWER
		criteria. It is also possible that activities will continue beyond 2035.
6	Have caribou numbers declined since mining began?	It is difficult to quantify. Canadian Royalties works with Caribou Ungava to understand migration and identify mitigation measures to reduce the impacts of mining on caribou.
7	Can an access road be built near Mesamax and Allammaq?	The construction of infrastructure and roads is quite complex, and requires several authorizations from the authorities, including numerous environmental characterizations to ensure that the flora and fauna of the target area are not destroyed. If needed, it is possible to contact our dispatcher by satellite phone. Employees are trained to respond in the event of an accident (e.g. off-road vehicle for pick up, firearms, basic medication, etc.).
8	What's the difference between the two blue zones on the watershed map?	They represent different watersheds, namely the direction where the water flows. The project is located in the Puvirnituq River watershed.
9	Do you have an incinerator?	No, Canadian Royalties uses a northern landfill with an open burn cell, as in the northern villages of Nunavik.
10	Do pipelines freeze in winter?	Yes, they can freeze. This is why regular maintenance is performed. It is also a challenge for the mine.
11	Can employees fish?	Employees are only allowed to fish as part of our Fishing program when it's in effect, and authorizations have been issued. This is with the exception of community events to which Canadian Royalties would be invited. For example, Salluit has invited Canadian Royalties to participate in an annual ice fishing event.
12	Do you have a hospital?	No, but there are trained nurses on-site. Serious cases are evacuated to the south via medevac or our chartered flights.
13	Do you sell cigarettes?	No.
14	Can your ships transport cars or merchandise from the south to the village?	No, Canadian Royalties' ships are not for commercial cargo like vehicles. They only transport the mined ore.

#	QUESTION OR COMMENT	ANSWER
15	Is Canadian Royalties Chinese-owned?	No, most investors are Swiss.
Salluit		
16	What mitigation measures do you have to reduce mining impacts to caribou?	The wildlife protection plan includes a caribou component, including a decision tree to slow traffic, reduce ore haulage during the migration period. There will also be implementation of research findings on mitigation measures for Ungava caribou (upcoming).
17	How many Inuit employees work at the mine?	37 Inuit employees. Canadian Royalties has ~1,000 total employees (incl. contractors), ~400 at site.

5 FOLLOW-UP ACTIONS

ACTION	PERSON ACCOUNTABLE	DEADLINE
Share impact study and climate change adaptation plan to a participant in Kangiqsujuag.	Nicolas Kuzyk	Done
Send a copy of the Inuit Perception Survey conducted in December 2024 to the KEQC.	Nicolas Kuzyk	Done
Look into data on caribou tracking via Makivik.	Nicolas Kuzyk	Done
Share the consultation report to concerned Inuit communities and governing bodies, and the Quebec Ministry of the Environment, the Fight against Climate Change, Fauna and Parks.	Nicolas Kuzyk	As soon as possible

PROJECT INFORMATION

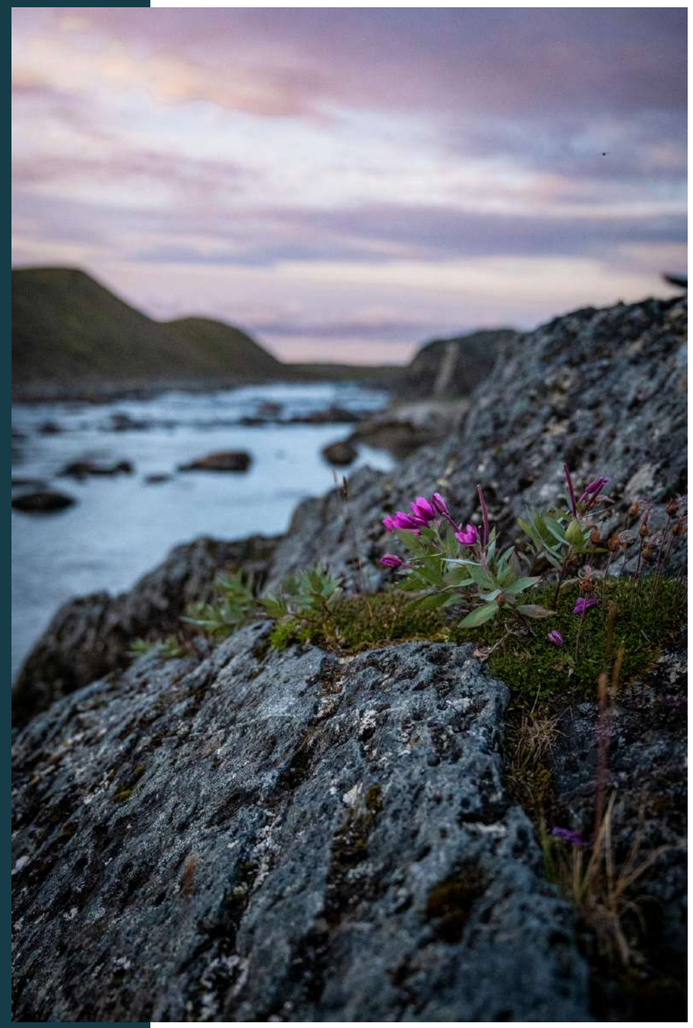

Photo: Simon Cousineau

The discovery of the new Inukshuk deposit in **2021** has increased the life of mine of the Nunavik Nickel Project to **2035**. Thus, to ensure continued mining operations, there is a **need to add a new tailings cell** to accommodate mine tailings from our different sites, including from the new **Inukshuk Project**.

This consultation will touch on **two main subjects**:

1. Tailings management
2. Inukshuk Project

ANTICIPATED MITIGATION MEASURES

- Hydrocarbon storage and machinery inspections
- Limit the use of heavy machinery near road and access to borrow pits

- Avoid vehicle idling
- Dust suppressants
- Dust monitoring at Inukshuk site (3 stations)
- Preliminary and regular machinery inspection

- Limit traffic to work areas
- Build caribou crossings
- Support for caribou behaviour research projects with Caribou Ungava
- Regular machinery inspection to ensure proper noise management

TAILINGS MANAGEMENT

2 options:

A MEQUILLON & MESAMAX PITS

Capacity : 6 600 000 m^3

New pipes that would pump tailings to each pit

- ✓ Minimal visual impact - use of existing infrastructures
- ✓ Minimal impact on land
- ✗ Distance between the Expo Complex and pits
- ✗ Potential impacts on fish habitat

B INFRASTRUCTURE AT EXPO

Capacity : 7 100 000 m^3

New tailings cell west of Expo Camp

- ✓ Greater distance from river and fish habitat
- ✓ Trusted tailings management techniques
- ✗ Additional infrastructure restoration
- ✗ Dust generation during construction

Appendices

Community Perceptions Survey

Key Findings

- Open from **April to December 2024**
- 122 respondents
  - 51% men
  - 44% women
  - 5% unspecified
- **24 questions**, including 9 open questions
- Analysis done by external consultant to **better understand community needs** and concerns
- Helping us **improve our practices** and communications

Inuit Culture
Strong desire to see Canadian Royalties position itself as an **ally of Inuit culture**, to promote and support local culture.

Environment
Concerns about **biodiversity** and environmental protection in general. **Sustainable waste management** considered a priority for many.

Awareness and Communication

- Respondents would like to know more about Canadian Royalties' **contributions to the economic and cultural development of Inuit communities**.
- Respondents expressed an interest in **more communication** about the company's commitments, activities, impacts, job opportunities, and environmental engagements.

Preferred Communication Channels
Formal and informal meetings, Facebook, local radio, regular email newsletters.

APPENDIX 3: INFORMATION PAMPHLET

SOME OF OUR COMMITMENTS

COMMUNITIES

- Nunavik Nickel Agreement
- Kauutaapikkut Strategic Table
- Esuma Consultation Table
- Annual Fishing Activity
- Nunavik Mining Workshop
- Inuit Community Information Program

ENVIRONMENT

- Thorough Environmental Monitoring
- Caribou Ungava Research Participation
- Fauna and Flora Protection Plan
- Program for Environmental Improvement in Inuit Communities
- Restor-Action Nunavik Fund

CONSULTATION

We wish to include **Inuit knowledge, land use, and additionnal components of interest** to communities to the project's impact assessment (ESIA).

A specific **subcommittee** for the Inukshuk Project will be implemented within the Nunavik Nickel Agreement.

WHY CONSULT NOW?

The discovery of the new **Inukshuk** deposit in 2021 has increased the life of mine of the **Nunavik Nickel Project** to 2035.

Thus, to ensure continued mining operations, there is a need to add a **new tailings cell** to accommodate mine tailings from our different sites.

We are consulting Nunavik's population about the Inukshuk Project and the new tailings cell, but other projects are currently under government assessment:

- Extension of Mesamax pit and addition of underground mine; increase in discharge flow from the mining water treatment plant
- Operation of a quarry (Expo 2b) and a sand pit (Esker 2b)
- Phase 2a: underground operations (Expo Sud, Ivakkak UG and Mequillon UG2 mines) and related projects
- Crushing of waste rock at the Ivakkak site

CONTACT US

Reach out to us for **knowledge-sharing**, **questions**, or **comments** about our projects.

communitysupport@canadianroyalties.com

canadianroyalties.com

Inukshuk Project and a New Tailings Cell

PUBLIC CONSULTATION

Information Document

ABOUT US

Canadian Royalties is a Montreal-based **mining company** operating copper and nickel mines in Nunavik under the **Nunavik Nickel Project**.

With over **600 employees**, including **8% Inuit Beneficiaries**, we promote economic growth and job opportunities in the region.

Our operations yield tangible benefits for the Northern communities surrounding the Nunavik Nickel Project. Since 2012, we have generated about **$700 M in revenues for Qualified Inuit Enterprises.**

ENVIRONMENTAL MANAGEMENT

SITE RESTORATION

Both the Inukshuk Project and the new tailings cell will be restored at the end of their operations.

$110 million

fund secured and allocated for the complete restoration of our sites.

Restoration subcommittee coming soon

SPILL PREVENTION

Solid procedures to prevent and manage spills:

- Emergency Measures Plan
- Complete remediation in case of a spill
- Spill kit in every vehicle and at multiple locations on site
- Systematic spill reporting by employees

NEW TAILINGS MANAGEMENT OPTIONS

A MEQUILLON & MESAMAX PITS

Capacity: 6 600 000 m ^{3}

New pipes that would pump tailings to each pit

BENEFITS

- Minimal visual impact - use of existing infrastructures
- Minimal impact on land

DRAWBACKS

- Distance between the Expo Complex and pits
- Potential impacts on fish habitat

B INFRASTRUCTURE AT EXPO

Capacity: 7 100 000 m ^{3}

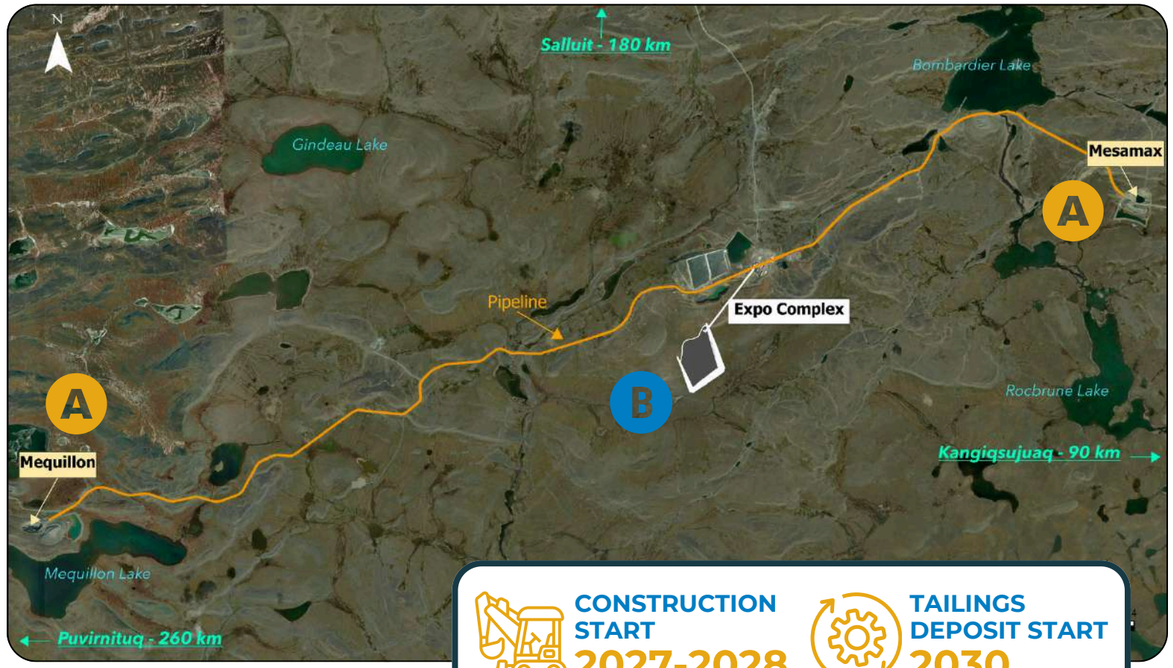

New tailings cell west of Expo Camp

BENEFITS

- Greater distance from river and fish habitat
- Trusted tailings management techniques

DRAWBACKS

- Additional infrastructure restoration
- Dust generation during construction

CONSTRUCTION START 2027-2028

TAILINGS DEPOSIT START 2030

INUKSHUK MINE PROJECT

HIGHLIGHTS

100% underground mining

3,100 tons of ore/day

4,808 tons of ore/day processed at the concentrator

Waste rock from Expo and Méquillon will be transported by **truck** for **backfilling at Inukshuk**.

NO NEW EFFLUENT

Contact water collected at Inukshuk will be **pumped** and **treated** at Expo.

ECONOMIC BENEFITS

Recognized Inuit enterprises, which **currently contribute significantly** to the Nunavik Nickel Project, are expected to receive **25.3% of project spending** totaling $434.5M.

MAIN INFRASTRUCTURES

- Ore pad and waste rock dump
- Mine water collection pond and waste water line to Expo Complex
- Platforms, domes and telecommunication tower
- Portal access to underground mine

**Location of surface infrastructure subject to change*

INUKSHUK DEVELOPMENT TIMELINE

2008 – 2045

- Exploration
- Prefeasibility studies and environmental assessments
- Government authorizations
- **2026** Construction
- Operations **2027-2034**
- Environmental monitoring
- Closure and progressive restoration
- Post-restoration environmental monitoring
- Community relations

Canadian Royalties is dedicated to evaluating, designing, constructing, and operating the project with a strong commitment to environmental sustainability and responsibility.

APPENDIX 4: POSTERS FOR KIOSKS

Caribou Protection ᑐᑦᑐᓂᒃ ᓴᓗᒻᒥᓂᖅ

A research team from Caribou Ungava is conducting a study and was present during the summers of 2023 and 2024, and will also be present in 2025.

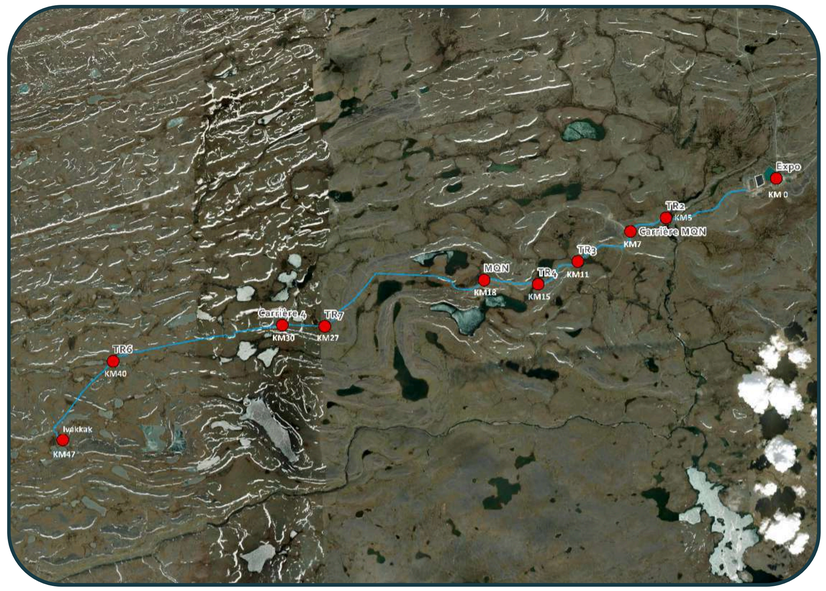

« The objective is to quantify the effects of mining transportation on caribou and to find ways to mitigate these effects ».

This project also evaluates the impacts of vehicle speed, caribou behaviour during road crossings, and optimal road crossing locations and road structure (height, slope, vegetation).

MAIN ANTICIPATED IMPACTS AND MITIGATION MEASURES*

CANADIAN ROYALTIES INC.

PHYSICAL ENVIRONMENT

AIR QUALITY

Impacts:
- Increased dust
- Greenhouse gases (GHG) emissions

Mitigation measures:
- Avoid vehicle idling
- Dust suppressants
- Dust monitoring at Inukshuk site (3 stations)
- Preliminary and regular machinery inspection

SOIL QUALITY

Impacts:
- Loss of usable land
- Risk of soil contamination
- Risk of ground cave ins

Mitigation measures:
- Limit the use of quarries
- Preliminary and regular machinery inspection
- Spill management procedure in the event of an environmental incident
- Construction of major engineering structures include measures to prevent the thawing of permafrost

HYDRAULIC & SEDIMENTARY REGIME

Impacts:
- Change in surface water flow pattern

Mitigation measures:
- Installation of a culvert to improve drainage
- Installation of sediment barriers near sensitive aquatic environments
- Ditch stabilization

SEDIMENTS & WATER QUALITY

Impacts:
- Risk of an increase in suspended matter in water
- Risk of contamination to waterways and river beds

Mitigation measures:
- Hydrocarbon storage and machinery inspections
- Limit the use of heavy machinery near road and access to borrow pits

FLORA

Impacts:
- Loss of wetland areas and terrestrial environments
- Risk of vegetation trampling

Mitigation measures:
- Machinery limited to work areas
- Compensation for lost wetland areas through contributions to the Program for Environmental Improvement in Inuit Communities (PEIIC)
- Flora and Fauna Protection Plan

FAUNA

AQUATIC FAUNA

Impacts:
- Potential disturbances to aquatic habitats
- Potential water quality disturbances and effects on fish communities

Mitigation measures:
- Use clean machinery and keep away from waterways
- Easily accessible spill prevention kits
- Apply mitigation measures for air, soil, water and sediment quality

AVIAN FAUNA

Impacts:
- Destruction of active nests on the ground or in shrubs
- Disturbance of nesting couples and migratory birds present near the work areas of the mine site and along the access roads

Mitigation measures:
- Monitoring : General surveillance and monitoring during construction, operation, closure and restoration
- Flora and Fauna Protection Plan

CARIBOU

Impacts:
- Loss of potential feeding habitat
- Risk of degradation to caribou habitat
- Caribou disturbance

Mitigation measures:
- Limit traffic to work areas
- Build caribou crossings
- Support for caribou behaviour research projects with Caribou Ungava
- Regular machinery inspection to ensure proper noise management

LAND MAMMALS

Impacts:
- Noise disturbances for several species
- Potential collisions with land mammals

Mitigation measures:
- Regular machinery inspection to ensure proper functioning
- Limit traffic to work areas
- Store household waste in closed containers

SPECIES IN PRECARIOUS SITUATIONS

(FAUNA AND FLORA)

Impacts:
- **Flora**: Risk of tremors to Puvirnituq Mountains Draba and dust deposit
- **Fauna**: Disturbance to short-eared owl nesting couples

Mitigation measures:
- Flora and fauna protection plan
- Additional inventorie near the access portal sector
- Monitor the Puvirnituq Mountains Draba
- Reduce truck speed to 30 km/h in the Inukshuk sector

HUMAN ENVIRONMENT

ECONOMY & EMPLOYMENT

Impacts:
- Job creation and local and regional economic benefits
- Labour mobility and changing lifestyles for Inuit employees

Mitigation measures:
- Preferential hiring of Inuit workers
- Continuation of the information and recruitment program in Inuit villages
- Promote Nunavik-based companies when contracting
- Comply with the updated policies of the Nunavik Nickel Agreement

INUIT TERRITORY & LAND USE

Impacts:
- Disruption to traditional Inuit activities within the territory of the Nunavik Nickel Project (PNNi)

Mitigation measures:
- Opportunity for Inuit workers to have shorter work rotations
- Identify new access roads and install traffic signs near snowmobile and vehicle trails
- Communication with the communities of Salluit and Kangiqsujuaq regarding the work carried out in the territory covered by the PNNi

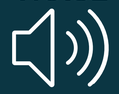

ARCHEOLOGY & HERITAGE

Impacts:
- No anticipated impacts

Mitigation measures:
- Archeological and heritage assessment
- Before work begins, archaeological sites must be clearly identified
- If remains of interest are discovered, the authorities will be immediately informed and measures will be taken to protect the site

NOISE

Impacts:
- Increased noise levels near work areas

Mitigation measures:
- Regular machinery inspection to ensure proper noise management
- Limit machinery movement to work areas
- If possible, isolate the main sound sources with absorbent material
- Mandatory hearing protection

LANDSCAPE

Impacts:
- Visual disturbances due to machinery, excavation and material storage

Mitigation measures:
- Reduce the height of temporary excavations
- Rehabilitate work areas so that they integrate with the natural landscape

*Please note that the above list is not exhaustive; please refer to the Impact Study for a detailed list of impacts and mitigation measures.

Environmental Monitoring

CANADIAN ROYALTIES INC.

OUR APPROACH

- Working with local communities and experts to improve our environmental practices.
- Annual government visits.
- Continuous monitoring, adaptation, and improvement of our methods to protect the land.
- Sharing results, involving local members, and being open to feedback.

INFORMATION SHARING

- Quarterly newsletters shared with communities.
- Invitations to community members to participate in environmental monitoring.
- Summary report available in Inuktitut.
- Open communication – we encourage feedback and questions from community members.

Water Quality Monitoring

- Regular water sampling at multiple stations, including Puvirnituq River.
- Treatment of mining effluents before discharge to meet strict environmental standards.
- Metal concentration monitoring in fish.
- Drinkable water monitoring in the Northern Village of Puvirnituq.

Pingualuit National Park Monitoring

- Noise levels measured from the Pingualuit National Park – no mining noise detected in 2024.
- Light monitoring to assess visual effects.

Deception Bay Monitoring

- Seal protection measures – no navigation allowed during pupping season.
- Dust and water quality monitoring.

Wildlife & Wetland Protection

- Fauna and Flora Protection Plan.
- Measures taken to prevent birds from using collection pond (goose buster).
- Wetland Loss Compensation Program.

Air & Dust Control

- Dust sampling at Expo mine, Deception Bay, and nearby areas.
- Use of dust suppression methods on roads.
